

Download Continuuity Reactor SDK, Install and Run Quick Start

Exercise Objectives

In this exercise, you will:

- Download and install the SDK
 - Learn basic Continuity Reactor operations: Start and Stop
 - Run the Quick Start tour
-

Exercise Steps

- Download `continuity-sdk-2.2.2.zip` from <https://repository.continuity.com/content/groups/releases/com/continuity/continuity-sdk/2.2.2/>
- Unzip the download
- Open a command line window in the SDK directory
- Go to `/bin` and run `reactor.sh start` or, (on Windows) go to `\bin` and run `reactor.bat start`
- Open a browser window, go to `http://localhost:9999`
- Follow the steps of the *Log Analytics Application* Quick Start Tour
- When finished, shut down the Reactor with `reactor.sh stop` or, (on Windows) `reactor.bat stop`

These steps are online at <http://continuity.com/docs/reactor/2.2.2/en/quickstart.html>

Exercise Summary

You should now:

- Be able to perform basic Reactor operations of Start and Stop
 - Have taken the Quick Start tour
 - Be able to use the Dashboard for basic operations
 - Be able to inject and query data through the Dashboard
 - Be able to modify an Application
 - Be able to redeploy and restart an Application
-
